Bengaluru, India

Education

Shri G. S. Institute of Technology & Science, Indore — Indore, MP
B.Tech Mechanical Engineering, ***Minor in Machine Learning****. CGPA 7.06/10* — *Sept 2023 – July 2027*

Experience

NeoSapien — Bengaluru, India
AI Engineer Intern — *June 2026 – Present*

- **Authored the LLM-as-judge rubric** the pipeline's output is scored against, and built the harness around it: scorer, live sampler against the production prompt, and **repeated trials reporting mean and spread**, so an improvement is only called when it clears run-to-run noise. Writing the rubric others score against is the part that generalises.
- Evaluated and annotated 20+ hours of speech data across Tamil, Telugu, Hindi and English, plus image sets, on a production pipeline.
- Shipped an **agent tool suite** in production over Slack, Telegram, Gmail and Calendar behind scoped permissions, where the hard problem was **tool selection and argument grounding**, not generation: judging which of several plausible outputs is the correct one.

ABV-IIITM Gwalior, with C3iHub IIT Kanpur — Gwalior, India
Research Intern, federated learning — *May 2025 – Aug 2025*

- Federated pneumonia-detection pipeline in **PyTorch** on **non-IID client data**, **94.2% AUC**. Non-IID is where a clean training curve can hide a model that has learned the client rather than the disease. Paper submitted to a journal.

Dept. of Labour, Govt. of Madhya Pradesh — Indore, India
System Analyst Intern, client MPSEDC — *Dec 2025 – Mar 2026*

- Built e-SAHAYAK, live across **12 factories, 500+ daily active workers**. Acceptance testing on real payroll records caught **wage-calculation defects before launch**.

CytoScan — Remote
ML Intern, medical imaging — *Sept 2025 – Nov 2025*

- EDA and preprocessing QC on **BraTS 2023** brain-MRI data (**1,250+ patients**) in Python notebooks: nibabel loaders, visualization tooling and voxel-intensity normalization across the cohort.

Projects

Second Brain *(Cloudflare Workers, Vectorize, D1, Workers AI, MCP)* — *2026*

- Self-hosted an open-source **RAG** memory server (fork of rahilp/second-brain-cloudflare) for personal use: Vectorize semantic recall served over REST and **MCP**, with keyword fallback.

Open Source

47 merged pull requests, 25 repositories *github.com/Atishyy27* — *2025 – Present*

- Correctness fixes in **Open Policy Agent**, **Hyperledger Fabric** and **fedimint**, each reviewed by a maintainer who asked for changes first. **Named in 5 upstream release notes across 4 projects.**

Technical Skills

- **Annotation and evaluation:** multilingual speech and image annotation, taxonomy and rubric design, QA review of other annotators' output, edge-case flagging, LLM-as-judge scoring, inter-run variance reporting.
- **ML:** PyTorch, scikit-learn, graph neural networks, SHAP, federated and non-IID training, embeddings and retrieval.
- **Engineering:** Python, TypeScript, Java, C++, Go, SQL; FastAPI, Node.js, React, Playwright; PostgreSQL, Docker, AWS, Git, Linux.
- **Not hands-on:** LangChain, LlamaIndex, TensorFlow, LLM fine-tuning and quantization.

Achievements

- **ACM ICPC Regionalist**, rank 12 of 49 teams at the Mysore on-site regionals 2025 (167 overall). **LeetCode Knight** (1014 solved, 1997 max). **Codeforces Specialist** (1539 max). **CodeChef 4 star** (1838 max).
- **Top 0.66%** of 90,000+, Adobe India Hackathon 2025. **Top 0.60%** of 4,000+, TruthTell 2025. **Summer of Bitcoin 2026** qualifier.
